Volume Reduction

MICRONEEDLING

Reduce the appearance of wrinkles,  
scars and stretch marks and  
promote skin repair.

🇨🇦 Licensed by Health Canada

Transform your skin with the scientifically proven solution for the most common symptoms of aging.

## FAQ'S

### WHAT IS MICRONEEDLING?

Simply put, microneedling is the insertion of very fine short needles into the skin for the purposes of rejuvenation. The most popular microneedling device, known as an eDermastamp, is made up of micro-fine needles that range in diameter from 0.5 and 2.5 millimeters. These fine needles are used to puncture the skin and create a controlled skin injury in order to rejuvenate skin. It's also referred to as collagen induction therapy (CIT).

### HOW DOES IT WORK?

For optimal comfort, a numbing cream will be applied to the face 30 minutes prior to the procedure. Before the start of the treatment the numbing cream is removed and a small amount of Hyaluronic acid is placed on a small area of the skin. The MD Needle Pen is glided over that area of the face to get full coverage for optimal rejuvenation. The process is continued until the entire face/area is treated.

### WHAT SHOULD I AVOID ON MY SKIN AFTER TREATMENT?

AHAs (glycolic Acid), retinol, acidic or active ingredients should not be used for 2-3 days after treatment to allow for maximum healing. During the first 48 hours, refrain from exercise, saunas, hot tubs, sunbeds and using make-up. Avoid strong sunlight and do not use sunscreen for the first 48 hours. Light 100% pure mineral make-up can be used after the first 24 hours.

### HOW LONG WILL MICRONEEDLING TAKE?

Including the application of numbing cream an entire full face procedure will take 45 minutes.

### WHAT CAN I EXPECT AFTER THE PROCEDURE?

Immediately following microneedling, expect the skin to be red and flushed, similar to a mild sunburn. Some clients will experience mild swelling, tightness, and pinpoint bleeding which can last 24-72 hours. Total healing time depends on the depth of the treatment, skin type and skin condition and one can expect slight peeling and dry skin.

### WHEN WILL RESULTS BE SEEN AFTER MICRONEEDLING?

Patients typically notice an immediate glow within the first few days, but the most visible improvement will take about 2-4 weeks and continue improving for 3 months.

### HOW MANY TREATMENTS WILL BE NEEDED?

A series of 3-4 treatments spaced 4-6 weeks apart is ideal for optimal results. Some conditions like deep wrinkles, advanced photo-aging, stretch marks and acne scars will need 6-8 treatments.

## BENEFITS

### REDUCES WRINKLES AND FINE LINES

The loss of elastin and collagen cause thinning, sagging skin, and facial wrinkles. Microneedling stimulates the production of natural elastin and collagen that reduces wrinkles and fine lines. You'll have younger looking skin with minimal downtime. Your pocketbook will like it too - this procedure is much less expensive than laser and light treatments.

### REPAIRS VISIBLE SCARS

Microneedling is proven to diminish the look of surgery and acne scars. This procedure breaks down old tissue and triggers the production of new elastin and collagen for healthier skin.

### REDUCES APPEARANCE OF STRETCH MARKS

Stretch marks are extremely difficult to treat and very few cosmetic treatments can improve their appearance. Microneedling, however, has been shown to improve the appearance of stretch marks, especially when combined with other treatments such as laser treatments.

### PREVENTS SIGNS OF AGING

Microneedling effectively and powerfully stops the early signs of aging as well as preventing new wrinkles and fine lines from occurring. When combined with consistent use of corrective antioxidant serums, this procedure aids in brightening your skin that results in a youthful glow. You can't get that from home treatments or other cosmetic products!

### REVERSES SUN DAMAGE AND PIGMENTATION

Once again, collagen is arguably the most vital way to improve the look of skin, and this goes far beyond reducing wrinkles. By stimulating collagen growth with microneedling, you can also reverse sun damage and discoloration, including the hyperpigmentation that comes with melasma. Microneedling is a promising treatment for the blotchy, brownish facial pigmentation that comes with this chronic condition.

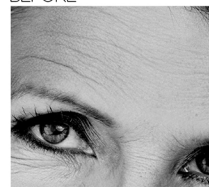

### SHRINKS PORES

It's a bit counter-intuitive, but microneedling doesn't actually enlarge pores as you might imagine piercing your skin hundreds of times would. Rather, one major benefit of using an eDermastamp is that it helps pores appear much smaller. Microneedling stimulates collagen in and around your pores, which causes them to plump and appear shrunken, if not closed. And let's be honest, who doesn't want smaller pores?

### CAN BE DONE ALL OVER YOUR BODY

Microneedling isn't exclusive to the face. It can be done on any area of skin that needs to be repaired - particularly areas that display stretch marks or acne scars, like the legs, chest, back, and butt. As few as 4-6 sessions could make a difference in these problem areas.
